

Kitchen Extractor Covers by Quirky Interiors

Our Brass kitchen extractor hood covers are made bespoke, to fit the under-canopy extractor of your choice.

Step 1.

Work out the size of extractor cover that you require. This is usually dependant on the width of your hob/range, the height of your ceiling and the correct distance from the hob (according to the hob instructions/building regs.)

Step 2.

Choose the under-canopy extractor that suits your requirements and budget, some are re-circulating, others are vented out, some are powerful others less- its worth checking the noise levels also!

Step 3.

Send us the sizes and the make and model of the extractor that you have chosen. We can then quote for you. We will then make the unit out of a moisture resistant material that we then coat in our metal, which is then aged and polished to your requested finish (samples available from the workshop)

Step 4.

The unit will be delivered and is to be installed by your kitchen fitter. Most extractors are fitted through a hole that is made in the base of the unit that we make. We cut the hole to the exact required size making it straightforward for your fitter. The front panel is designed to be able to clip on and off making the installation process simple!
